

ISMAEL MADOU GAGI

Data & AI Engineer

imadougagi@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | +33 6 68 73 92 21 | Paris, France

Data & AI engineer completing an MSc in Statistics. At Kheopsys, I contributed to Agent Factory, a SaaS agentic AI platform that lets companies automate their business workflows: agent skill development, the document ingestion pipeline and its evaluation methodology, and industrialisation on GCP and Azure through Terraform. I am looking for a role combining data platform engineering and generative AI.

PROFESSIONAL EXPERIENCE

Kheopsys — data and AI consultancy

Feb. 2026 – Aug. 2026

Data & AI Engineer (final-year internship)

Paris, France

Agent Factory / Kerinos — SaaS agentic AI platform

Python, PostgreSQL/pgvector, Docker

- Developed agent skills: custom business plugins for the platform's first client (automated generation of questionnaires, interview guides and moderation guides), multi-format output skills (PDF, Word, Excel, PowerPoint, podcast) and system skills such as human-in-the-loop validation.
- Built the document ingestion pipeline feeding the knowledge base: parsing (Docling), chunking, embedding and loading into PostgreSQL/pgvector; around 100,000 documents ingested for the first client.
- Defined the evaluation methodology for the platform's retrieval and text-to-SQL capabilities: reference test sets, retrieval and generation metrics, LLM-as-judge protocol.

Cloud industrialisation, CI/CD and orchestration

GCP, Azure, Terraform, Kubernetes, Jenkins

- Deployed the platform on GCP and Azure (AKS, Key Vault, ACR, Managed Identity), provisioned through Terraform (infrastructure as code), containerised with Docker and orchestrated on Kubernetes.
- Set up CI/CD chains (Jenkins), orchestrated ingestion and processing workflows (Hatchet), and wrote the technical architecture and security documentation.

Churn scoring and customer segmentation — Acadomia

Python, scikit-learn, SHAP

- Built the transformation layer from raw behavioural and transactional data: cleaning, aggregation, feature engineering and production of the training dataset.
- Churn probability scoring model: class imbalance handling, decision threshold selection driven by business cost, and customer base segmentation.
- SHAP-based reason attribution turning each score into an actionable cause for retention teams; wrote the analysis sections of the client deliverable.

Trésor Public du Niger — National Treasury

Summers 2022 & 2023

Data Analyst (June–Aug. 2023) • Treasury Operations Intern (June–July 2022)

Niamey, Niger

- Automated performance indicators and designed cleaning and quality-control procedures for budget data.

PROJECTS

Automated economic data collection pipeline | FRED & Eurostat APIs, GitLab CI/CD

Oct. – Dec. 2025

- Built the extraction stage: scheduled collection of economic and monetary time series from the Fed (FRED) and Eurostat APIs, orchestrated by a GitLab CI/CD pipeline running at regular intervals.
- Merging, cleaning and incremental updating of the collected series; used downstream for exchange rate forecasting (ARIMA, LSTM).

EDUCATION

Université de Reims Champagne-Ardenne

Sept. 2024 – Sept. 2026

MSc in Statistics for Evaluation and Forecasting — with honours (Mention Bien)

Reims, France

- Big data ecosystem (Spark), databases and SQL, supervised and unsupervised learning, time series, econometrics, NLP.

Université de Sousse

Sept. 2021 – June 2024

BSc in Economic and Financial Engineering — with highest honours (Mention Très Bien)

Sousse, Tunisia

- Operations research, time series, econometrics. Ranked 1st of cohort in year 2.

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy), SQL, R

Pipelines & orchestration: ETL/ELT, API ingestion, document parsing, workflow orchestration, data testing

Generative AI: agents and skills, RAG (indexing, retrieval, generation), vector databases, LLM-as-judge evaluation, text-to-SQL

Machine learning: classification, churn scoring, customer segmentation, time-series forecasting

Cloud: GCP, Azure (AKS, Key Vault, ACR), AWS

Tools: PostgreSQL, pgvector, Docling, Firecrawl, Hatchet, Spark, Terraform, Docker, Kubernetes, Git, GitLab CI/CD, Jenkins

Certifications: AWS Cloud & ML • AWS Generative AI • SAS Base

Languages: French (native) • English (intermediate — comfortable in meetings and technical discussions)
